

Economic Insecurity – a strategic vulnerability

Government, Money, and People

\$ areas are to scale

economic insecurity — people, industries, government — is strategic insecurity for the nation

Sources: United for ALICE; Giving USA; NCCS (Urban Institute); USAspending.gov; OMB

Nonprofit Sector Money Flows

Nonprofit Sector

numbers are approximate

- 65% goes to commercial businesses
- 30% funds 12.8m nonprofit jobs
- 5% reaches households as direct aid

Household Aid Effectiveness

Philanthropic Aid Effectiveness

Philanthropic household direct aid covers ~3% of essential needs

(after welfare)

~12% of private donations reaches households as direct aid

Sources: BLS; FRED; BEA; USAspending.gov; OMB

Consumer Spending – 68% of the economy

Annual Consumer Spending

per person (group averages)
proxy for net income for lower half – no savings

\$ and population areas are to scale
numbers rounded for readability
spending excludes income tax

We give more welfare and aid to 142m Americans to help keep (most of) them alive than we pay them for their labors.

> 90% are below the national average spending/person
\$57,925

Top 10% average spending per person
\$289,600
an average top-10% household of 2 adults and 2 children spends \$1,158,400 each year
~25X the direct spending of the bottom 42%

the consumer base is on life support — spending is concentrating — the trajectory is unsustainable

Sources: BLS; BEA; FRED; United for ALICE; USAspending.gov

Challenges in Managing the Economy

tough decisions to be made — irrespective of politics

Looming Dangers – Part 1

- **Fiscal Vice Tightens** – no painless options: cut funding, borrow more, ‘print’ more; USD weakens, insecurity grows
- **Support Capacity Squeezed** – nonprofit funding down, jobs lost; welfare and aid demand up, support down

Nonprofit Sector Funding Cuts

numbers are approximate

The Government Narrative

- Govt pays \$1 Tn to nonprofits; only \$108Bn reaches households as direct aid
 - The overall economy takes priority — 5.7% unemployment is painful but survivable
 - Foundations have \$1.3–1.6Tn in unspent tax-deducted donations — they can step up
- It’s politically viable and economically sound.

National unemployment: 4.3% to ~5.7%
Nationally manageable – locally devastating

The fire department is now at risk.

Sources: NCCS (Urban Institute); IRS; Giving USA; USAspending.gov; BLS

Looming Dangers – Part 2

- **AI Comes of Age** – replacing new hires now, plus some existing jobs; range of roles displaced widens, impact grows relentlessly

AI's Coming of Age

AI Job Losses

- estimates reflecting ROI-driven AI adoption, including robotics
- 2040 losses ~34% to 42% of white collar + admin + production jobs
- cascading losses rise with stress: 10% to 30% of primary losses
- 2025: 54,836 AI-cited layoff plans — an early signal (Challenger; excludes “cost-cutting”, etc)
- college grad underemployment: 42.5% (NY Fed, 2025 Q4)
- job loss ≠ unemployment: BLS counts ‘employed’ if you worked ≥1 hour that week
- 40% of employers anticipate reducing staff where AI can automate tasks (WEF)

Once a job type is lost to AI,
it's never coming back.

Sources: BLS; NY Fed; Challenger; WEF

Accessible Economic Security – a solution for everyone

strengthening the economy and the country — making society AI resilient

Sources: FRED; BEA; BLS; OMB; IRS

“How?”

- **Consumer money stock:** the pool of money circulating through the consumer side (68%) of the economy
 - **Recirculation time:** time for a spent consumer dollar to return as another consumer purchase — currently 279 days (9.2 months)
 - Cutting average recirculation time by **26 days** (to 8.3 months) creates ~\$2 Tn of new consumer spending without any more money
 - We achieve the same \$2 Tn gain by accelerating just 0.26% of the \$14.8 Tn consumer money supply (~\$39 Bn) to weekly recirculation
- that’s how everyone can access economic security — without it costing anyone any money

The Full Story

There's a lot more to a car than how the engine converts gas into motion — an engine alone does not make a car.

Same with economic security.

To understand how we can create economic security from slow-moving money — making it accessible to every household in need, while giving every person and every type of organization (business, government, and nonprofits) access to new financial gains — see the full story at:
